DESCRIPTION OF FIRST AID MEASURES

Inhalation: IF INHALED: Move into fresh air and keep at rest. Get medical attention if any discomfort continues.

Eye Contact: IF IN EYES: Continue to rinse for at least 15 minutes under running water with eyelids held open. Get medical attention.

Skin Contact: IF ON SKIN (or hair): Remove contaminated clothing immediately and wash skin with soap and water. Get medical attention promptly if irritation or other symptoms occur after washing.

Ingestion: Do not induce vomiting. Never induce vomiting or give anything by mouth if the victim is unconscious or having convulsions. Immediately rinse mouth and drink plenty of water. Keep person under observation. If person becomes uncomfortable get medical attention.

MOST IMPORTANT SYMPTOMS AND EFFECTS, BOTH ACUTE AND DELAYED

The most important known symptoms and effects are described in the labelling (see section 2) and/or in section 11. Further important symptoms and effects are so far not known.

INDICATION OF THE IMMEDIATE MEDICAL ATTENTION AND SPECIAL TREATMENT NEEDED

Note to physician. Treatment: Treat according to symptoms (decontamination, vital functions), no known specific antidote.

5. Fire-Fighting Measures

Extinguishing Media: Use carbon dioxide or dry chemical for small fires; aqueous foam or water spray for large fires. Unsuitable extinguishing media: water jet.

Special hazards arising from the substance or mixture: Hazards during fire-fighting include harmful vapours and evolution of fumes/fog.

High temperatures may cause spontaneous polymerizing reaction generating heat/pressure. Closed containers may rupture or explode during a runaway polymerization. Use a water spray or fog to reduce temperature of containers.

Special Firefighting Procedures: Firefighters should wear full protection clothing and self-contained breathing apparatus (SCBA). Thoroughly decontaminate firefighting equipment including all firefighting apparel after the incident.

6. Accidental Release Measures

Personal Precautions, protective equipment and emergency procedures: Use protective gloves, goggles and suitable protective clothing. In case of inadequate ventilation, use respiratory protection. Maximize ventilation after accidental release.

Environmental Precautions: Contain contaminated water / firefighting water. Do not discharge into drains/surface waters/ groundwater. Avoid release to the environment.

Methods and material for containment and cleaning Up: Remove sources of ignition. Absorb with sand or other inert absorbent. Spillage may be stored as chemical waste in approved area.

Waste Disposal Method: Do not dispose of in sewers, lakes, rivers or streams. Scoop all contaminated material into compatible bottles or drums for proper disposal. Dispose of in accordance with all applicable federal, state and local regulations. National or regional provisions may also be in force.

Reference to other sections: See section 8, 13.

7. Handling and Storage

Handling Precautions: Keep away from heat, sparks and open flame. Use mechanical ventilation in case of handling which causes formation of vapours. Handle and open container with care. Wear full protective clothing for prolonged exposure and/or high concentrations. Take precautionary measures against static discharges.

Storage Precautions: Protect from light, including direct sunrays. Container may be filled for only 90%. Keep containers tightly closed, separate from oxidizing agents. Store in original container in a dry, cool and well-ventilated place. Store at temperatures between 5°C and 30°C. Do not expose to temperatures above 50°C for more than 24 hours. High temperatures may cause spontaneous polymerization.

Specific end use(s): None.

Expiry date: Product expiry date can be found on container label. Product is only guaranteed for use prior to this date.

EXPOSURE CONTROLS

Appropriate engineering controls: Do not eat, drink or smoke at the work place.

Ventilation Controls: Ensure adequate ventilation, including appropriate local extraction, to ensure that the defined occupational exposure limit is not exceeded.

For operations where contact can occur a safety shower and eye-wash facility should be available.

Individual protection measures, such as personal protective equipment (PPE)

Respiratory Protection: Wear suitable respiratory protective equipment if engineering controls are insufficient, or not present, and exposure to levels above the DNEL is likely. A suitable mask with filter type A (EN141 or EN405) may be appropriate.

Eye and Face Protection: Wear eye/face protection. Wear approved chemical safety goggles where eye exposure may occur. High-efficiency particulate respirator with full face-piece recommended. Chemical splash goggles or a face shield is recommended during operations where splashing could occur.

Skin Protection: Avoid all skin contact. Wear suitable gloves. Butyl and nitrile rubber gloves offer short-term protection. Latex surgical gloves offer little protection. Gloves should be stored correctly and changed regularly, especially if excessive exposure has occurred. Depending on the conditions of use, cover as much of the exposed skin area as possible by wearing aprons, long pants, and long sleeved shirts.

Other Controls: Always use good personal hygiene and housekeeping practices. Keep working clothes separately. Take off contaminated clothing immediately. Wash soiled clothing before reuse. Keep away from food, drinks and animal feed. Wash hands thoroughly after handling.

Reactivity: See “Chemical stability”, below.

Chemical stability: Stable under normal temperature conditions. Stable if stored and handles as prescribed/indicated.

Conditions to Avoid: Avoid heat, flames and other sources of ignition. Avoid contact with free radical initiators. Avoid contact with isocyanates and oxidizing agents. Avoid contact with vinyl polymerization initiators. Avoid exposure to high temperatures, direct sunlight or ultra violet (UV) radiation.

Incompatible Materials to Avoid: Avoid contact with radical forming initiators, peroxides, strong alkalies or reactive metals to prevent exothermic polymerization.

Hazardous Decomposition Products: With regard to possible decomposition products refer to Section 5. Oxides of carbon.

Possibility of hazardous reactions / hazardous polymerization: Hazardous polymerization may occur. Uncontrolled polymerization may cause rapid evolution of heat and increase in pressure that could result in violent rupture of sealed storage vessels or containers.
