Color Kit

16 Colors, A Full Spectrum of Possibilities

The first integrated color mixing solution for stereolithography, the Formlabs Color Kit enables 3D printing in a range of colors without the manual work of finishing and painting. Field test product concepts more quickly with 3D prints that fit their environment.

1 Select a recipe. Formlabs has tested 16 colors that you can find recipes for on our website. Choose the best one for your project, or mix your own.

2 Add Color Pigment to Color Base. Follow the recipe to measure the appropriate amount of Pigment and add it to your Base cartridge.

3 Shake. Mix your Color Resin thoroughly by shaking the cartridge.

4 Print. Insert the cartridge into your Form 2 3D printer as usual and print!

Form X is Formlabs' experimental product platform. Form X showcases innovative tools, materials, and approaches, for advanced users who want to explore the boundaries of what's possible with desktop stereolithography.
